

In order to ensure we are receiving the correct items from our supplier community and to ensure the correct items are going outbound to our customers, we require that only ONE scanable barcode be placed on each level of the packaging including at the case level.

We also ask that barcodes be placed on one of the sides or the top of the case, NOT on the bottom of the case, it will not scan as the bottom is placed on the conveyer.

We are currently implementing procedures at our Distribution Centers that validates that the GTIN's we have setup, match what is being scanned. When a barcode is scanned that is not setup then the item requires manual intervention within our DC's to ensure the correct items are being shipped to our customers.

If you are currently shipping cases to McLane Company that have multiple barcodes, we would ask for you to respond back with an acceptable timeline as to when the other barcodes can be removed and what GTIN will remain on the case.
