

Steps to START Synchronizing GDSN Data with UNFI

1. First, load your item data into your home data pool.
 - Load all GTIN hierarchy levels – Each, Inner Pack, Case, Pallet, etc.
 - Make sure orderable unit and consumer unit flags are set correctly.
2. Fill out UNFI online *Trading Partner Form*, found at <https://1worldsync.com/unfi>.
 - UNFI is currently subscribed to Target Market “US”, so you shouldn’t expect a direct subscription from us to your GLN.
3. Once you’re set up in UNFI systems for Data Sync, publish your items to our **0041130079153** GLN, being sure to use the correct publication type matching your *intent*:

Do you intend to synchronize existing UNFI items? If so, publish as **INITIAL LOAD**.

- You can ask us to provide a list of already-existing items via email: datasync@unfi.com

OR

Do you intend to create new items in UNFI systems? If so, publish as **NEW**.

- After publication, new items need to be “topped off” and submitted in our eNewItem portal: <https://svharbor.com/>

Additional Information can be found in the *UNFI Implementation Guide*.
